29 PIN CCP MUX CONNECTOR

GT-29-CCP Mux Connector is an electro mechanical termination installed onto a double armored blowout preventer control cable. This cable connector plug (CCP), designed with a capacity of 25 control contacts and 4 power contacts, is fully pressure balanced to prevent any pressure differential and all conductors are independently sealed. It mates with the existing flange connector receptacle (FCR) used on the Hydril control system. It has proven to be the most reliable designed connector throughout the drilling industry since 1975 and its simplicity makes it the most reliable and easy to service. It has been successfully tested to 12,000 ft. in both dry and flooded conditions.
